This supplemental action is provided only because the action of 10 July 2006 failed to set a shortened statutory period for response.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10 and 12-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Dolejsi. Dolejsi shows a housing 11 with an inlet 13 (antechamber of claim 12) and outlet 32 and a valve element 12 that blocks flow in a first closed position and is so biased by a spring 17 that is in chamber 21 that is always isolated from the fluid flow. Apertured member 10 has apertures 14 controlled by the valve. The chamber is vented to the exterior of the valve at port 22. The valve 12 is located between cylindrical partition 23 and the housing. Regarding claim 9, the spring, radially speaking, is between the partition 23 and housing 11.

Claims 1-10 and 12-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Opara et al. opera shows a housing with an inlet 12 (antechamber of claim 12) and outlet 38 and a valve element 41/56 that blocks flow in a first closed position and is so biased by a spring 43 that is in chamber 35 that is always isolated from the fluid flow. Apertured member 11 has apertures 18 controlled by the valve. The chamber is vented to the exterior of the valve at port 36. The valve is located between cylindrical partition 45 and the housing outer wall. Regarding claim 10, the spring, radially speaking, is between the partition 45 and the housing.

Page 3 Application/Control Number: 10/758,060

Art Unit: 3753

Claim 11 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Each of Dawes and Steuby show a biased sleeve valve that rides on an apertured cylindrical member to control flow. Johnson shows a similar valve, but manually operated.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen M. Hepperle whose telephone number is 571-272-4913. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eric Keasel can be reached on 571-272-4929. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
